*“Enhancing Efficiency, Ensuring Quality”*

CHEM EXPERTS

Innovative specialty chemicals paving the way for a sustainable future, leading in quality, innovation, and unmatched customer satisfaction.

Factory: Gat No.389, Vill.  
Dhanore, Alandi-Markal  
Road, Tal. Khed, Dist. Pune.  
India. 412105

The word EXPERTISE denotes adept, proficient, skilled, competence, knowledge, command etc. While all these words mean "having best knowledge and experience in a trade or profession," expert implies extraordinary proficiency and often connotes knowledge as well as technical skill.

Chem Experts India is a specialty chemical Manufacturing, Formulation & Distribution Company established in 2019 by technocrats having more than seven decades of combined experience and expertise in various application fields.

The company believes in peak performance, reliability and cost-effectivity rather than only unit prices. In the current scenario, it has been often observed that performance of speciality chemicals are faded by cheaper prices which ultimately misguides buyers to pay more and compromise on less than desired.

## PRODUCT RANGE AND APPLICATIONS

### 01. PULP AND PAPER

#### **Retention & drainage aid, Coagulants & Flocculants:**

In recent years retention of fiber fines and faster drainage of pulp has become an essential part of paper making. Our XPERTS KMX series of retention aids and XPERTS COL series of drainage aid, coagulants are more popularly used as the cost effective solutions for higher retention of costly fibers and faster drainage on wire. Our XPERTS FLOC Series is one the best flocculants for Krofta, ETP and efficient sludge dewatering practices for more cleaner systems.

### 02. IRON ORE

#### **Flocculants:**

Inefficient flocculants in iron ore beneficiation and palletization can ruin the plants and thickening operation. We have wide range XPERTS FLOC series of flocculants which are time tested and well established over any international products as one of the best and cost efficient flocculants in India. Fastest settling rates, excellent overflow clarity and desired underflow compaction are some key features of our flocculant which makes stand apart from the crowd.

### 03. SAND WASHING

Silica sand is widely used in glass making other plants as the major raw materials. Washing the raw sand is an essential part for making it suitable for further process. Our specially designed XPERTS FLOC series is highly recommended for this. Drastic increase of manufactured sand over river sand for urban and rural construction has the only solution for the scarcity of natural river sand. In process of M-sand making our XPERTS FLOC series of flocculants have proved to be blessings for reclaiming for almost 87-98 % water for the recycle.

### 04. WATER & WASTE WATER

Inefficient coagulation and effluent treatment can compromise water clarity, regulatory compliance, and operational efficiency. Our XPERTS COAG series delivers high-performance coagulants that enhance particle aggregation, ensuring superior clarity, reduced sludge volume, and optimized chemical use. Complementing this, our specialized ETP solutions effectively remove contaminants, enabling clear and compliant discharge with minimal sludge generation. Designed for industries like mining, paper, pharmaceuticals, and petrochemicals, our advanced treatment chemicals provide cost-efficient, sustainable solutions that optimize processes while meeting stringent environmental standards

### 05. OTHERS

Our specialized water treatment solutions for fish and meat processing plants effectively remove organic matter, control bacterial growth, and improve wastewater clarity. By optimizing coagulation, flocculation, and biological treatment, we help industries achieve better water reuse, reduced sludge volume, and compliance with environmental discharge standards.

## Dedicated to a Greener Planet !

Chem Experts India is committed to sustainability and environmental stewardship. Our products not only improve operational efficiency but also align with eco-friendly practices to foster a greener future.
